

Mechanical Design Engineer

Location: Plymouth

Salary: Market rate, depending on experience

Oakmount Control Systems Limited is a fast-moving, growing, engineering business based in the South West with offices in the vibrant city of Plymouth in Devon and the historic town of Yeovil in Somerset. Our talented team of automation focused, electrical and mechanical engineers work on many unique projects for blue chip international customers in a wide range of industry sectors including Food & Beverage, Pharmaceutical, Aerospace, Automotive and Defence to name a few. We design and manufacture special purpose machinery and process control systems, working with all the top leading industrial brands.

Due to continued expansion, we are now looking for a Mechanical Design Engineer to play a key role in the design and development of our automation projects.

This role will suit an experienced Mechanical Design Engineer who is able to support projects from concept through to design and manufacture. A successful candidate would ideally come from a similar background although all relevant mechanical design experience will be considered. We use the 3D CAD package Solidworks, so prior experience would be a distinct advantage, although not critical. In house training will be provided if required.

As well as the hands-on mechanical design and project support, your responsibilities will also include:

- Researching & recommending potential new technologies, processes and ways of working that could be beneficial to the project, or company to optimise performance, quality and profitability.
- Ensuring, where appropriate that customer specifications and delivery requirements are fully evaluated and adhered too, both internal and externally.
- Assisting the sales team with concept designs and budget estimations.
- Adhering to and enforcing the internal document control process.
- Effective self-management to achieve agreed targets.
- Specification and procurement of project specific materials, in line with the project budget and customer requirements.
- Communicating any issues that may hinder the achievement of agreed targets and expectations.
- Developing effective cross functional relationships and appropriate ways of working with both the electrical and mechanical elements of the business.
- Assisting the assembly department with the build and commissioning of projects.
- Supporting projects at our customers premises both in the UK and overseas.

You will be:

- An experienced Mechanical Design Engineer with a background within a similar industry.
- Able to work autonomously, prioritise and meet deadlines effectively.
- Passionate and driven, with the desire to produce and deliver to a high standard in a fast-paced environment.
- Adept at using a 3D CAD package.
- A team player with the ability to mentor more junior members of the team.
- Wishing to work within an exciting growing business with international clients.

So, if you would like a high-profile position in a role with a significant amount of variety and autonomy, then please apply and tell us more about yourself.

This role is based in Plymouth, Britain's Ocean City, which is one of Europe's most vibrant waterfront cities. Located by a stunning waterfront and harbour, this busy historic hub also borders the beautiful South Hams and picturesque county of Cornwall.
